Snowmobile triggered on Cedar

Cedar Mtn. Northern Madison 1/19/2020 Code HS-R3-D2.5-O Elevation

10000

Aspect

NE

Latitude

45.22630

Longitude

-111.49600

Notes

I was on the west side of Pioneer Mtn digging a pit for YC Ski Patrol. I heard a few groups of snowmobiles cruising around the foothills of cedar. I turned and saw two snowmobilers cresting the ridge above the slide pictured as the debris was settling down. The sledders enjoyed the view for a few minutes before turning back the way they came and stumbled upon the slide they had unknowingly triggered. They skirted around the side of the crown and stopped for a few minutes. Based on the height of the rider off his sled, I would estimate the crown to be roughly 10' at its max height. NE as aspect elow Cedar

Number of slides

Number caught

Number buried

Avalanche Type

Hard slab avalanche

Trigger Modifier

u-An unintentional release

R size

3

D size

2.5

Bed Surface

O - Old snow

Problem Type

Persistent Weak Layer

Slab Thickness

60.0 inches

Vertical Fall

300ft

Slab Width

500.00ft
