

Wind slab broke here Snow Depth: 140 cm (4-5 feet)

Deeper, wider avalanche could break here on weak sugary snow

We triggered an avalanche of wind-drifted snow as we approached very carefully from a low angle slope above, on 1/30/2020. It broke within recently drifted snow, but these slides could be enough weight to break deeper and wider on sugary layers deep in the snowpack. Photo: GNFAC
