Natural avalanches on Hardscrabble

Hardscrabble Peak Bridger Range 3/2/2019 Code SS-N-O Elevation 9000 Aspect NE NE Notes

From the email: "While touring Fairy Lake and Frazier Basin, we noticed two large natural slides on the E-facing bowls of Hardscrabble Peak. Low visibility, but crowns looked to be about 2-4 ft. high and 150-300 ft. wide. Fractured at approx. 9,000', slid approx. 500-800 ft. into the lower angle slopes below. N-facing slopes at 8,800' were heavily wind-loaded, with a hard wind <u>wind slab</u> sent which made skinning difficult. This 5" wind s wind slab ured easily under our skis and slid over a layer of light snow from the recent storm."
