Skier triggered and natural new snow avalanches in Beehive

Beehive Basin Northern Madison 5/8/2021 Code SS-AS-R1-D1.5-I Elevation 10000 Aspect NE Latitude 45.34070 Longitude -111.39100 Notes

From obs: 5/9/21: "Yesterday we went to check out the new snow in Beehive Basin.... While traversing... along the north ridge of 10602, we triggered a small <u>wind slab</u> that carried down into Peruvian, which then released another small w <u>wind slab</u> on a northeast a <u>aspect</u> of the face (photo). The crown height of this w <u>wind slab</u> was measured at 60cm at it's deepest point, and approximately 30ft wide by 10ft long.

Looking down into the face of Peruvian, we observed a natural dry loose <u>slide</u> that released from the ridge. We observed an increase in wind speed throughout the morning, and a shift in wind direction from west to southwest in the early morning moving to west to north west by the late morning."
