**HS115**  
 Stability Test Notes:  
**66: scarey!**  
**0: CT8**  
**0: CT12**  
 Layer note  
**17-66: Pro**

Notes: This pit yielded some interesting results especially with our Compression tests. Overall stability has been improving since the last snow fall. We still conservative in what we rode, and areas we ventured into. We estimate the snow that fell in the 45-60 minutes that we did our pit profile to upwards of 2cm, it quickly tapered off after we departed the pit location, but wind was increasing the rest of the day.
