Notes: This pit was much more representative than the first in Watkins. Not enough of a slab we think to get an ECTP. Nearby slopes with a wind load avalanches and propagated for several 100 feet. A few small avalanches (less than 30ft wide) occurred on similar terrain with no wind load. S nearby avalanche: <http://www.mtavalanche.com/images/12/natural-avalanche-lionhead>
